The information in this manual has been checked carefully and is believed to be accurate; however, Opto 22 assumes no responsibility for possible inaccuracies or omissions. Specifications are subject to change without notice.

Opto 22 warrants all of its products to be free from defects in material or workmanship for 30 months from the manufacturing date code. This warranty is limited to the original cost of the unit only and does not cover installation, labor, or any other contingent costs. Opto 22 I/O modules and solid-state relays with date codes of 1/96 or later are guaranteed for life. This lifetime warranty excludes reed relay, SNAP serial communication modules, SNAP PID modules, and modules that contain mechanical contacts or switches. Opto 22 does not warrant any product, components, or parts not manufactured by Opto 22; for these items, the warranty from the original manufacturer applies. These products include, but are not limited to, OptoTerminal-G70, OptoTerminal-G75, and Sony Ericsson GT-48; see the product data sheet for specific warranty information. Refer to Opto 22 form number 1042 for complete warranty information.

Welcome to the G4 Digital I/O Family Data Book

OPTO 22

Introduction

Generation 4 digital I/O, introduced by Opto 22 in 1989, provides increased density over older modules, while maintaining single-channel flexibility. LEDs and fuses are generally on the modules rather than the rack to make them visible and easy to service. The G4 digital I/O family includes a wide variety of modules, mounting racks, and accessories to meet the needs of your system.

What's In This Book

The *G4 Digital I/O Family Data Book* pulls together information on all Generation 4 digital I/O family products. This same information can also be found in individual product data sheets; it is brought together here for your convenience.

This book covers the following:

Chapter 2, "Generation 4 Digital I/O Mounting Racks"—Choose your mounting rack from the table on [page 4](#), then see detailed drawings and specifications on the following pages.

Chapter 3, "Generation 4 Racks with Integral Digital I/O"—Detailed drawings and specifications for a special group of rack products with I/O circuitry permanently integrated.

Chapter 4, "Generation 4 Digital I/O Modules"—See the table on [page 33](#) for an overview of all G4 modules. Detailed drawings and specifications follow.

Chapter 5, "Generation 4 Digital I/O Accessories"—Find details on G4 accessories, including an adapter card, cables and connectors, fuses, and a jumper strap.

Appendix A, "Designing Custom I/O Mounting Racks"—Includes helpful information for customers who are designing their own mounting systems for Generation 4 digital I/O modules.

Appendix B, "Wiring Diagrams"—Examples for mapping field wiring to mounting racks for each type of module that can be plugged into the rack.

For Help

If you have any questions about Generation 4 Digital I/O products, please contact Opto 22. Phone hours are Monday through Friday, 8 a.m. to 5 p.m. Pacific Time.

Phone: 800-TEK-OPTO (835-6786)
951-695-3080
(Hours are Monday through Friday,
7 a.m. to 5 p.m. Pacific Time)

Fax: 951-695-3017

Email: support@opto22.com

*NOTE: Email messages and
phone calls to Opto 22
Product Support are
grouped together and
answered in the order
received.*

When calling for technical support, be prepared to provide a complete description of your hardware and operating system to the Product Support engineer. This information should include:

- accessories installed
- type of power supply
- types of I/O modules and racks used
- third-party devices installed
- how the system is wired.

Generation 4 Digital I/O Mounting Racks

Overview of Mounting Racks

This chapter includes information on mounting racks used with G4 digital I/O modules. For integral racks, which have permanent I/O circuitry built into the rack, see [page 27](#).

Features

The following features apply to all mounting racks in this chapter:

- Minimum mounting space required
- Spare module fuse included
- UL recognized, CSA certified, and CE compliant
- Uses a single 5, 15, or 24 VDC power supply for control power
- You can insert and remove modules easily and quickly without disturbing field wiring.
- Modules are securely attached with a threaded captive hold-down screw.
- Operating temperature: 0° to 70° C
- Humidity: 95% relative humidity, non-condensing

Choose Your Rack

Choose a rack from the following table, and then see the referenced page in this chapter for detailed drawings and specifications.

Model	Number of Channels	Input Modules	Output Modules	AC	DC	Built-in Fuse Tester	Field Connector	Control Connector	Special Features	See
G4PB4	4	●	●	●	●	●	screw-type barrier strip	screw-type barrier strip	Good for compact locations where only a few I/O points are needed.	page 5
G4PB4R	4		●	●	●		screw-type barrier strip	screw-type barrier strip	Channel-to-channel isolation between all field and control circuits. Outputs can be wired for either positive-true logic or standard negative-true logic. Cannot use dry contact output modules.	page 6
G4PB8	8	●	●	●	●	●	screw-type barrier strip	50-pin header connector	G4AC5 compatible (See page 52.)	page 7
G4PB8H	8	●	●	●	●	●	screw-type barrier strip	50-pin header connector	For use with Optomux B1, Pamux B5, and mistic B100 brain boards. Works with Opto 22 PBSA/B/C power supply. Power indicator light.	page 8

G4PB32DEC	32	●	●	●	●	●	screw-type barrier strip	50-pin header connector	Interfaces to a DEC computer DRV-11J parallel card.	page 23

G4PB4 Mounting Rack

Description

The G4PB4 I/O mounting rack compactly accommodates up to four G4 digital I/O modules in applications where only a few I/O points are needed. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field, control, and mounting rack power connections.

Specifications

Operating temperature	0° to 70° C
Interface connector (field and control)	Screw-type barrier strip accommodates up to 10 AWG wire

Dimensions

Connections

Notes:

1. Even pins on control side are connected by etch to common.
2. +VCC and return are connected to control terminals 1 and 2.

G4PB4R Mounting Rack

Description

The G4PB4R output mounting rack compactly accommodates up to four G4 output modules and features channel-to-channel isolation between all field and control circuits. Positive-true and standard negative-true control signals from computer I/O ports may be connected to the racks.

Modules are inserted and removed easily and quickly without disturbing the field wiring. The threaded captive hold-down screw on each module securely attaches them to the rack. Barrier strips with screw terminals provide the field, control, and mounting rack power connections.

Specifications

Operating temperature	0° to 70° C
Interface connector (field and control)	Screw-type barrier strip accommodates up to 10 AWG wire

Dimensions

Connections

NOTE: G40DCSR, G40DCSR5, G40ACSMA, G40AC5MA, G40DC5MA WILL NOT PLUG INTO THIS RACK.

G4PB8 Mounting Rack

Description

The G4PB8 I/O mounting rack accommodates up to eight G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field and mounting rack power connections. A header connector accepts a standard 50-pin cable for the logic connections (See [page 51](#) for information about the G4AC5.)

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accommodates up to 10 AWG wire
Control:	50-pin header connector

Dimensions

See the following page for connection information.

Connections—G4PB8

- Notes:
1. Even pins on control connector are connected by etch to common.
 2. +VCC and return connected to terminals marked LOGIC + and -.
 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the

Module Position	Control (Header Connector)	Field (Terminal Strip)
0	47	1 and 2
1	45	3 and 4
2	43	5 and 6
3	41	7 and 8
4	39	9 and 10
5	37	11 and 12
6	35	13 and 14
7	33	15 and 16

G4PB8H Mounting Rack

Description

The G4PB8H I/O mounting rack accommodates up to eight G4 I/O modules. A header connector accepts a standard 50-pin cable, the Optomux® B1, Pamux® B5, or B100 brain board for logic connections. Barrier strips with screw terminals provide the field and mounting rack power connections.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw. The logic supply is fused with a 1A fuse

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accommodates up to 10 AWG wire
Control:	50-pin header connector
Power:	Two-position screw terminal or Opto 22 PBSA/B/C power supply

Dimensions—G4PB8H

Connections—G4PB8H

Notes:

1. Even pins on control connector are connected by etch to common.
2. +VCC and return connected to terminals marked +5V and GND.
3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
4. Use only 5 VDC logic modules when using the mounting rack with a brain board.

Module Position	Control (Header Connector)	Field (Terminal Strip)

7	33	15 and 16

G4PB16 Mounting Rack

Description

The G4PB16 I/O mounting rack accommodates up to 16 G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field and mounting rack power connections. A header connector accepts a standard 50-pin cable for the logic connections. (See [page 51](#) for information on the G4AC5.)

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accommodates up to 10 AWG wire
Control:	50-pin header connector

See the following page for dimensions and connection information.

Dimensions—G4PB16

Connections—G4PB16

Notes:

1. Even pins on control connector are connected by etch to common.
2. +VCC and return connected to terminals marked LOGIC + and -.
3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.

Module Position	Control (Header Connector)	Field (Terminal Strip)
0	47	1 and 2
1	45	3 and 4

13	21	27 and 28
14	19	29 and 30
15	17	31 and 32

G4PB16H Mounting Rack

Description

The G4PB16H I/O mounting rack accommodates up to 16 G4 I/O modules. A header connector accepts a standard 50-pin cable, the Optomux® B1, Pamux® B5, or Mystic™ B100 brain board for logic connections. Barrier strips with screw terminals provide the field and mounting rack power connections.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw. The logic supply is fused with a 1A fuse

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accommodates up to 10 AWG wire
Control:	50-pin header connector
Power:	Two-position screw terminal or Opto 22 PBSA/B/C power supply

See the following page for dimensions and connection information.

G4PB16HC Mounting Rack

Description

The G4PB16HC I/O mounting rack accommodates up to 16 G4 I/O modules and features an extra row of terminals for field loop power connections. A header connector accepts a standard 50-pin cable, the Optomux® B1, Pamux® B5, or B100 brain board for logic connections. Barrier strips with screw terminals provide the field and mounting rack power connections. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw. The logic supply is fused with a 1A fuse.

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accommodates up to 10 AWG wire
Control:	50-pin header connector
Power:	Two-position screw terminal or Opto 22 PBSA/B/C power supply

See the following page for dimensions and connection information.

Dimensions—G4PB16HC

Connections—G4PB16HC

Notes:

- Even pins on control connector are connected by etch to common.
- +VCC and return connected to terminals marked +5V and GND.
- At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
- Use only 5 VDC logic modules when using the mounting rack with a brain board.

Module Position	Control (Header Connector)	Field (Terminal Strip)

15	17	31 and 32

G4PB16I Mounting Rack

Description

The G4PB16I I/O mounting rack accommodates up to 16 G4 I/O modules and features channel-to-channel isolation between all field and control circuits. Output modules may have their control side wired for either positive-true or standard negative-true control signals from computer I/O ports. Input modules operate only with negative true logic.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a captive hold-down screw. Barrier strips with screw terminals provide the field, control, and mounting rack power connections.

Specifications

Operating temperature	0° to 70° C
Interface connector (field and control)	Screw-type barrier strip accommodates up to 10 AWG wire

See the following page for dimensions and connection information.

Dimensions—G4PB16I

Connections—G4PB16I

Notes:

- At each module position on the field terminal strip, the lower number is always connected to pin 1 of the module.
- Input modules and dry contact output modules (G4ODC5R and G4ODC5R5) require the power supply's ground to be connected to the control side's GND terminal. These modules also require that odd-numbered connections on the control side be connected to +VCC.
- Input modules use even-numbered control terminals and can only be wired for negative-true logic.
- To wire output modules for standard negative-true logic, connect the odd-numbered control terminals to VCC and use the even-numbered terminals for control.
- To wire output modules for positive-true logic, connect the even-numbered control terminals to logic ground and use the odd-numbered terminals for control.

See application examples on the following page.

Module Position	Control (Header Connector)	Field (Terminal Strip)
0	47	1 and 2
1	45	3 and 4
2	43	5 and 6
3	41	7 and 8
4	39	9 and 10
5	37	11 and 12
6	35	13 and 14
7	33	15 and 16
8	31	17 and 18
9	29	19 and 20
10	27	21 and 22
11	25	23 and 24
12	23	25 and 26
13	21	27 and 28
14	19	29 and 30
15	17	31 and 32

Application Examples—G4PB16I

For wiring G4 digital output modules (except dry contact modules):

Positive-True Logic Connection to PLC

* This wiring can be done using a G4STRAP.

Negative-True Logic Connection to PLC

* This wiring can be done using a G4STRAP.

G4PB16T Mounting Rack

Description

The G4PB16T I/O mounting rack accommodates up to 16 G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field, logic, and mounting rack power connections.

Modules on the G4PB16T can be wired for standard negative true logic only. (For positive true logic on outputs, see form #460, the G4PB16I data sheet.)

Specifications

Operating temperature	0° to 70° C
Interface connector (field and control)	Screw-type barrier strip accommodates up to 10 AWG wire

Dimensions

See the following page for connection information.

Connections—G4PB16T

Module Position	Control (Header Connector)	Field (Terminal Strip)
0	47	1 and 2
1	45	3 and 4
2	43	5 and 6
3	41	7 and 8
4	39	9 and 10
5	37	11 and 12
6	35	13 and 14
7	33	15 and 16

12	23	25 and 26
13	21	27 and 28
14	19	29 and 30
15	17	31 and 32

Notes:

1. +VCC and return are connected to control terminals marked + and -.
2. All odd-numbered terminals on the control terminal strip are connected by etch to the VCC return terminal marked -.
3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.

G4PB24 Mounting Rack

Description

The G4PB24 I/O mounting rack accommodates up to 24 G4 I/O modules. Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Barrier strips with screw terminals provide the field and mounting rack power connections. A header connector accepts a standard 50-pin cable for the logic connections. The rack works with the G4AC5 computer interface. (See [page 51](#).)

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accepts up to 10 AWG wire
Control:	50-pin header connector

Dimensions

See the following page for connection information.

Connections—G4PB24

Notes:

- 1. Even pins on control connector are connected by etch to common.
- 2. +VCC and return connected to terminals marked LOGIC + and -.
- 3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.

G4PB32DEC Mounting Rack

Description

The G4PB32DEC I/O mounting rack accommodates up to 32 G4 digital I/O modules and is used to interface to a DEC computer DRV-11J parallel card. A header connector on the rack is used for logic connections by using a standard 50-conductor, flat ribbon cable. Barrier strips with screw terminals provide the field and mounting rack power connections.

Insert and remove modules easily and quickly without disturbing field wiring. Modules are secured to the mounting rack with a threaded captive hold-down screw.

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accommodates up to 10 AWG wire
Control:	50-pin header connector
Power:	Two-position screw terminal for a VCC power supply

See the following pages for dimensions and connection information.

Dimensions

Connections—G4PB32DEC

Notes:

1. Pins 17, 19, 21, 22, 23, 25, 26, 28, 30, 31, 32, and 34 on the control connector are etch-connected to the - terminal.
2. +VCC and the return are connected to terminals marked + and -.
3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
4. The +VCC connection requires +5 VDC.

Generation 4 Racks with Integral Digital I/O

Overview of Racks with Integral I/O

This chapter includes information on racks that have permanent I/O circuitry built in. For mounting racks that are used with separate I/O modules, see [page 3](#).

Features

The following features apply to all racks with integral I/O:

- Minimum mounting space required
- UL recognized, CSA certified, and CE compliant
- Uses a single 5 VDC power supply for control power
- Screw-type barrier strip for field connections; 50-pin header connector for control connections
- Operating temperature: -30° to 70° C. Humidity: 95%, non-condensing
- Can be modified for use with the G4AC5 adapter card. See [page 52](#) for more information.

Choose Your Rack

Choose a rack from the following table, then see the referenced page for detailed drawings and specifications.

Model	Number of Channels	Input Modules	Output Modules	AC	DC	Built-in Fuse Tester	Special Features	See
G4PB16J	16	●			●	n/a	Optically isolated 4–16 VDC input channels built in. Use with Optomux B1, Pamux B5, and mastic B100 brain boards. LED indicator for each channel. Logic supply is fused.	page 28
G4PB16K	16	●			●	n/a	Optically isolated 16–28 VDC input channels built in. Use with Optomux B1, Pamux B5, and mistic B100 brain boards. LED indicator and fuse for each channel. Logic supply is fused.	page 28

G4PB16J and K Racks with Integral Inputs

Description

The G4PB16J and G4PB16K DC input racks provide 16 channels of optically-isolated inputs for sensing on/off DC voltage levels by a B1, B5, or B100 brain board, or any ISA bus-compatible computer with an Opto 22 G4AC5 adapter card. Their compact size and design yields a substantial space and cost savings over other 16-channel I/O boards.

All input channels are identical on each board and are ideal for applications that need to monitor several 4-16 VDC signals (model G4PB16J) or 16-28 VDC signal (model G4PB16K). On-board LED indicators display each channel's on/off status.

Typical applications for the integrated DC input racks include sensing the presence or absence of voltage from sources such as BCD devices, TTL level devices, thumbwheel switches, and barcode readers.

Control connections are easily made to a 50-pin header connector. Barrier strips with screw terminals provide the field and rack power connections. The logic supply is fused with a 1A fuse. These racks can be used with the G4AC5 computer interface if jumpers 1 and 2 are removed. (The figure above right shows the location of these two jumpers. See [page 51](#) for more information.)

Specifications

	Units	G4PB16J	G4PB16K

G4PB16L Rack with Integral Outputs

Description

The G4PB16L DC output rack provides 16 channels of optically-isolated outputs for controlling or switching small DC loads by aB1, B5, or B100 brain board, or any ISA bus-compatible computer with an Opto 22 G4AC5 adapter card. Their compact size and design yields a substantial space and cost savings over other 16-channel I/O boards.

All channels are identical on each board and output 5–60 VDC. They are ideal for applications that need to control or switch several similar small DC loads. On-board LED indicators display each channel's on/off status.

Typical applications for the integrated DC output rack include controlling or switching low-power DC relays, low-power DC solenoids, and DC lamps and indicators.

Control connections are easily made to a 50-pin header connector. Barrier strips with screw terminals provide the field and rack power connections. The logic supply and all output channels are individually fused with a 1A fuse. This rack can be used with the G4AC5 computer interface if jumpers 1 and 2 are removed. (The figure above right shows the location of these two jumpers. See [page 51](#) for more information.)

Specifications and Dimensions

Output voltage range	5–60 VDC
Current rating: @ 45° C @ 70° C	0.5 A 0.2 A
Isolation: Input-to-output (transient) Channel-to-channel	4,000 volts 300 volts
Off-state leakage at maximum voltage	1 mA
One-second surge	1.3 A
Turn-on time	100 μsec
Turn-off time	100 μsec
Output voltage drop maximum peak	1.6 VDC
Nominal logic voltage	5 VDC
Logic voltage range	4.5–6 VDC
Logic input current at nominal logic voltage	190 mA
Temperature: Operating Storage	-30° to +70° C -30° to +85° C

Connections-G4PB16L

Generation 4 Digital I/O Modules

Overview of All Modules

Features

The following features apply to all modules:

- Small footprint design, reducing mounting space by approximately 50 percent
- UL recognized, CSA certified, and CE compliant
- Passed NEMA Showering Arc Test (ICS 2-230)
- Meet IEEE Surge Withstand Specification (IEEE-472)
- Operating temperature: - 30° to 70° C.

Digital DC Input Modules

Description

Opto 22's G4 DC input modules are used to detect on/off DC voltage levels. Each module provides up to 4,000 V of optical isolation between field inputs and the logic output of the circuit.

All DC input modules except the G4IDC5K and the G4IDC5D are designed with filtering on the input and a hysteresis amplifier, providing high noise rejection and transient-free, "clean" switching. The G4IDC5K is a fast-switching module used to detect signals produced by photoelectric switches and TTL devices. The low-cost G4IDC5D is used for data acquisition. The G4IDC5MA is a special module featuring a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Typical applications for DC input modules include sensing the presence or absence of voltage with devices such as proximity switches, limit switches, selector switches, push buttons, photoelectric switches, and TTL-compatible devices. All modules include a built-in LED status indicator.

Digital AC Input Modules

Description

Opto 22's G4 AC input modules are used to detect on/off AC voltage levels. Each module provides up to 4,000 volts of optical isolation between field inputs and the logic output of the circuit.

All AC input modules are designed with filtering on the input and a hysteresis amplifier, providing high noise rejection and transient-free "clean" switching. The G4IAC5MA is a special module featuring a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Typical applications for AC input modules include sensing the presence or absence of voltage with devices such as proximity switches, limit switches, float switches, selector switches, push buttons, toggle switches, and thermostats. All modules include a built-in LED status indicator.

Digital Input Test Module

Description

Opto 22's G4SWIN input test module is used to simulate an input on an I/O mounting rack. Each module contains a toggle switch that closes a contact on the logic side. An internal resistor limits the current through the switch and provides a load similar to that of an actual input module. An internal debounce circuit allows rapid switch closures without false counts.

The G4SWIN module works with logic voltages of 5, 15, and 24 volts. Internally, there is no connection to the field inputs. A built-in LED indicates the simulated on/off status.

This module is ideal for simulating discrete external events when testing application software.

Specifications—Digital Input Test Module

Isolation, input-to-output (transient): 1 ms 1 minute	4000 volts 1500 volts
Temperature: Operating Storage	-30 to +70 °C -30 to +85 °C

Digital AC Output Modules

Description

Opto 22's G4 AC output modules are used to control or switch AC loads. Each module provides up to 4,000 volts of optical isolation between field outputs and the control side of the circuit, and each features zero voltage turn-on and zero current turn-off. All AC output modules are equivalent to single-pole, single-throw, normally open contacts (Form A, SPST-NO) except the G4OAC5A5, which is equivalent to a single-pole, single-throw, normally closed contact (Form B, SPST-NC).

The G4OAC5MA and the G4OAC5AMA are special modules featuring a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Typical applications for AC output modules include switching loads such as AC relays, solenoids, motor starters, heaters, lamps, and indicators. All digital AC output modules include a built-in LED status indicator.

Schematics—AC Output Modules

Dry Contact Output Modules

Description

Opto 22's G4 family of modules includes two dry-contact, low contact-resistance DC output modules: the G4ODC5R and the G4ODC5R5.

The G4ODC5R is a single-pole, single-throw, normally *open* mechanical relay (Form A, SPST-NO). The G4ODC5R5 is a single-pole, single-throw, normally *closed* mechanical relay (Form B, SPST-NC).

Typical applications for these dry-contact modules include analog signal and communication line multiplexing.

Specifications—Dry Contact Output Modules

	Units	G4ODC5R G4ODC5RFM ^{1,2}	G4ODC5R5 G4ODC5R5FM ^{1,2}
Contact form		Form A SPST mechanical relay	Form B SPST mechanical relay
Normal position		Open	Closed
Contact rating	VA	10	10
Maximum switching voltage	VDC	100	100
	VAC	130	130
Maximum switching current	A	0.5	0.5
Maximum carry current	A	1.5	1.5
Contact resistance	Megohms	200	200
Turn-on time	microseconds	500	500
Turn-off time	microseconds	500	500
Contact bounce	microseconds	250	250
Mechanical life	cycles	5x10 ⁶	5x10 ⁶
Logic voltage range	VDC	4.8–6	4.8–6
Logic pickup voltage ¹	VDC	0.8	0.8
Logic dropout voltage ¹	VDC	3.8	3.8
Logic input current at nominal logic voltage	milliamps	14	14
Isolation voltage (transient) input-to-output	VDC	1,500	1,500
Ambient temperature: Operating Storage	°C	0 to 70	0 to 70
	°C	-60 to +105	-60 to +105

¹Pickup and dropout voltages are measured from 5 VDC logic ground.

²Part numbers ending in FM are Factory Mutual approved.

NOTE: The power rating of the dry contact module must not exceed 10 VA under steady-state or momentary in-rush conditions.

For voltages at or below 20 volts, the current limit is 0.5 amps. For voltages above 20 volts, the maximum allowable current is determined by the following equation:

$$\frac{10 \text{ VA}}{\text{voltage}} = \text{Current maximum}$$

See next page for additional information.

Specifications—Dry Contact Output Modules (continued)

Current Limit at Key Voltages:

V	mA
5	500
12	500
24	416
100 ¹	100
120	83
130 ²	76

¹ Maximum DC voltage is 100 VDC.

² Maximum AC voltage is 130 VAC.

Dimensions and Schematics—Dry Contact Output Modules

Note: Also compatible with Totem Pole or Tri-State Output.
Will not plug into G4PB4R mounting rack.

* Normally open for G4ODC5R, normally closed for G4ODC5R5.

Digital Output Test Module

Description

Opto 22's G4SWOUT output test module is used to simulate a G4 output on an I/O mounting rack. Each module contains a manual toggle switch on the field side. The switch closes a contact that shorts the field terminals to turn on a field output. Internally, there is no connection to the logic side of the module.

The G4SWOUT module is ideal for testing field wiring and devices by simulating an output from the computer. The switch handles 3 amps at 250 VAC/VDC.

Specifications—Output Test Module

Output voltage range	250 VAC/VDC
Isolation, input-to-output (transient)	4000 volts
Temperature: Operating Storage	-30 to +70 °C -30 to +85 °C

Dimensions and Schematics—Output Test Module

Generation 4 Digital I/O Accessories

Overview of Accessories

Accessories for Generation 4 I/O include the following:

- Adapter card—see below.
- Cables and connectors—see [page 53](#).
- Fuses—see [page 54](#).
- Jumper strap—see [page 54](#).

PC to I/O Mounting Rack Adapter Card (G4AC5)

Description

The G4AC5 adapter card provides an interface between the PC and Opto 22 digital I/O mounting racks. As many as four G4AC5 adapter cards can be installed per PC.

A 50-conductor ribbon cable, supplied with the adapter card, connects the adapter to an I/O rack with header-style connectors

Requirements

- An external 5VDC power supply is required at the I/O mounting rack. This power cannot be provided by the G4AC5. Opto 22 recommends the use of a **linear** power supply for this purpose.
- A software driver is required to access the G4AC5 from Windows NT or when using Visual Basic on any operating system. For more information, contact Opto 22 Product Support. (See [page 2](#).)

Rack Part Numbers for the G4AC5 Adapter Card

Fully Compatible Racks

The following racks are compatible with the G4AC5 adapter card:

- G4PB8
- G4PB16
- G4PB24

Racks That Can Be Modified

The following racks can be modified for use with the G4AC5 by removing the jumpers to pins 1 and 49. (These jumpers are labeled JP1 and JP2 on racks G4PB16J, G4PB16K, and G4PB16L.) Jumpers can be de-soldered or clipped.

WARNING: If these jumpers are not removed, the power-on LED will be lit regardless of the actual 5-volt power status. This can result in a false power-on indication and may cause damage to the PC.

- G4PB16J
- G4PB16K
- G4PB16L

Incompatible Racks

The following racks are NOT compatible with the G4AC5 because they do not have jumpers that can be removed. The rack's power-on LED will be lit regardless of the actual 5-volt power status. This can result in a false power-on status.

WARNING: Using any of these racks with the G4AC5 may cause damage to the PC.

- G4PB8H
- G4PB16H
- G4PB16HC

Cables and Connectors

Description

Opto 22 supplies several standard cables to interface with host controllers. There are three series of cables, each available in standard lengths. All three cable types use 50-conductor ribbon cable.

Each series of cables is designated according to the type of connector on each end.

- The HH series has a header connector on both ends.
- The CA series has an edge connector on both ends.
- The OD series has a header connector on one end and a card edge connector on the other.

Specifications

Length (feet)	Series Part Numbers		
	HH (Header to header)	CA (Card edge to card edge)	OD (Header to card edge)
1.5	HH1.5	--	--
2	--	CA2	OD2
4	HH4	CA4	OD4
6	HH6	CA6	OD6
8	HH8	CA8	OD8
10	HH10	CA10	OD10

Building Your Own Cables

If the standard cables do not meet your requirements, the following list of manufacturers can help you choose connectors and cable. Contact the manufacturer's distributor for more information.

50-Conductor Cables:

3M	P/N 3365/50
ALPHA	P/N 3580/50 or 3583/50

Header Connectors:

Circuit Assemblies, Inc.	P/N CA50IDS2-C-SPT
--------------------------	--------------------

Edge Connectors:

3M	P/N 3415-0001
Panduit	P/N 055-050-455

Connectors with Strain Reliefs:

Use only Panduit Corporation parts	P/N 050A050-455
------------------------------------	-----------------

Fuses

Description

Generation 4 output modules use a 4-amp fuse mounted on the module. Each mounting rack includes one spare module fuse.

Additional fuses can be ordered from Opto 22 or directly from Wickmann, at phone number (404) 699-7820.

Ordering Guide

Part Number	Description
FUSEG4	4-amp fuse for Generation 4 output modules (Wickmann, P/N 19370K)
FUSE01G4	1-amp fuse for Generation 4 digital logic power and brick power regulators (Wickmann, P/N 19373-1A)

Jumper Strap

Description

Jumper straps are used to simplify wiring in applications that require a common connection between each I/O module position. The G4STRAP can be used on all G4 digital I/O mounting racks. (It does not work with the G4PB16J, G4PB16K, or G4PB16L racks with integral I/O, however.) The jumper strap has an insulated coating and can be cut to size.

Dimensions

Designing Custom I/O Mounting Racks

Introduction

Customers designing their own mounting systems for Generation 4 digital I/O modules may find the following information helpful. Circuit board layout information and a circuit board parts list are provided to help you get started.

Refer to individual module information in [“Generation 4 Digital I/O Modules” on page 33](#) for additional specifications.
