Adjustment Procedures

(same for both units)

1. Place the target at the desired distance.
2. Turn the sensing potentiometer (on the back of the unit) counterclockwise until the red output LED turns off.
3. Slowly turn the potentiometer clockwise. The sensing range is set when the red output LED turns on.

NOTE: Only the "far" span limit is adjustable. The "near" span limit is fixed at 70mm for the UB500 and 200mm for the UB2000.

Target Response Curves

The surface area, shape and density of a target determine where it can be detected. The diagrams below illustrate two targets and their corresponding areas of detection. The target must lie completely in its specified sensing envelope to ensure accurate detection.
