- Notes:**
1. The Zener impedance is derived from the 1KHZ AC voltage which results when an AC current having an RMS value equal to 10% of the Zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK}. Zener impedance is measured at two points to insure a sharp knee on the breakdown curve and to eliminate unstable units
 2. Valid provided that electrodes at a distance of 10 mm from case are kept at ambient temperature
 3. Measured under thermal equilibrium and DC test conditions
