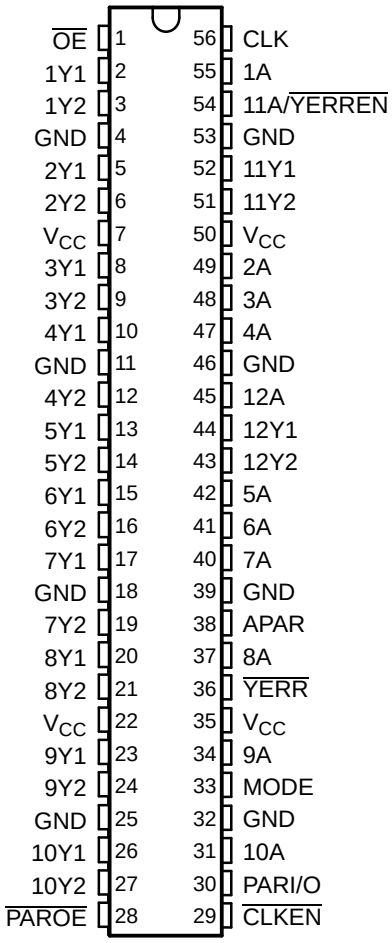
SN74ALVCH16903
3.3-V 12-BIT UNIVERSAL BUS DRIVER WITH PARITY CHECKER AND DUAL 3-STATE OUTPUTS

SCES095D – MARCH 1997 – REVISED SEPTEMBER 2004

FEATURES

- **Member of the Texas Instruments Widebus™ Family**
- **EPIC™ (Enhanced-Performance Implanted CMOS) Submicron Process**
- **Checks Parity**
- **Able to Cascade With a Second SN74ALVCH16903**
- **ESD Protection Exceeds 2000 V Per MIL-STD-883, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)**
- **Latch-Up Performance Exceeds 250 mA Per JESD 17**
- **Bus Hold on Data Inputs Eliminates the Need for External Pullup/Pulldown Resistors**
- **Package Options Include Plastic 300-mil Shrink Small-Outline (DL), Thin Shrink Small-Outline (DGG), and Thin Very Small-Outline (DGV) Packages**

DGG, DGV, OR DL PACKAGE
(TOP VIEW)



DESCRIPTION

This 12-bit universal bus driver is designed for 2.3-V to 3.6-V V_{CC} operation.

The SN74ALVCH16903 has dual outputs and can operate as a buffer or an edge-triggered register. In both modes, parity is checked on APAR, which arrives one cycle after the data to which it applies. The $\overline{YERR}$ output, which is produced one cycle after APAR, is open drain.

MODE selects one of the two data paths. When MODE is low, the device operates as an edge-triggered register. On the positive transition of the clock (CLK) input and when the clock-enable ($\overline{CLKEN}$) input is low, data set up at the A inputs is stored in the internal registers. On the positive transition of CLK and when $\overline{CLKEN}$ is high, only data set up at the 9A–12A inputs is stored in their internal registers. When MODE is high, the device operates as a buffer and data at the A inputs passes directly to the outputs. 11A/$\overline{YERREN}$ serves a dual purpose; it acts as a normal data bit and also enables $\overline{YERR}$ data to be clocked into the $\overline{YERR}$ output register.

When used as a single device, parity output enable ($\overline{PAROE}$) must be tied high; when parity input/output (PARI/O) is low, even parity is selected and when PARI/O is high, odd parity is selected. When used in pairs and $\overline{PAROE}$ is low, the parity sum is output on PARI/O for cascading to the second SN74ALVCH16903. When used in pairs and $\overline{PAROE}$ is high, PARI/O accepts a partial parity sum from the first SN74ALVCH16903.

A buffered output-enable ($\overline{OE}$) input can be used to place the 24 outputs and $\overline{YERR}$ in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive bus lines without need for interface or pullup components.

$\overline{OE}$ does not affect the internal operation of the device. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

DESCRIPTION (CONTINUED)

To ensure the high-impedance state during power up or power down, $\overline{OE}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

Active bus-hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

The SN74ALVCH16903 is characterized for operation from 0°C to 70°C.

FUNCTION TABLES

FUNCTION

INPUTS					OUTPUTS	
$\overline{OE}$	MODE	$\overline{CLKEN}$	CLK	A	1Yn(1)–8Yn(1)	9Yn(1)–12Yn(1)
L	L	L	↑	H	H	H

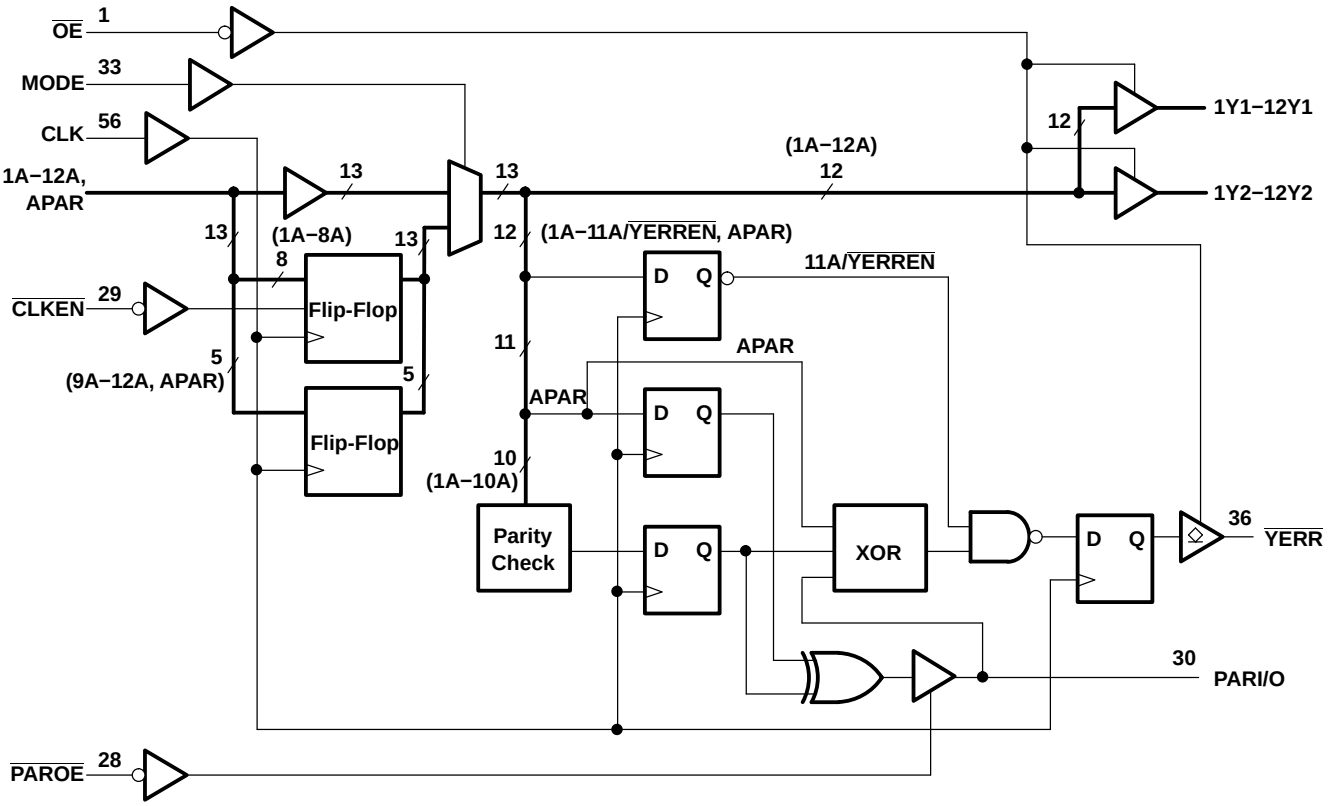
H	X	X	Z

(1) This table applies to the first device of a cascaded pair of SN74ALVCH16903 devices.

LOGIC DIAGRAM (POSITIVE LOGIC)



ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage range		-0.5	4.6	V
V_I	Input voltage range(2)		-0.5	4.6	V
V_O	Output voltage range(2)(3)		-0.5	V_{CC} + 0.5	V
I_{IK}	Input clamp current	V_I < 0		-50	mA
I_{OK}	Output clamp current	V_O < 0		-50	mA
I_O	Continuous output current			±50	mA
	Continuous current through each V_{CC} or GND			±100	mA
θ_{JA}	Package thermal impedance(4)	DGG package		81	°C/W
		DGV package		86	
		DL package		74	
T_{stg}	Storage temperature range		-65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
(3) This value is limited to 4.6 V maximum.
(4) The package thermal impedance is calculated in accordance with JESD 51.

RECOMMENDED OPERATING CONDITIONS(1)

				MIN	MAX	UNIT
V_{CC}	Supply voltage			2.3	3.6	V
V_{IH}	High-level input voltage	V_{CC} = 2.3 V to 2.7 V		1.7		V
		V_{CC} = 2.7 V to 3.6 V		2		
V_{IL}	Low-level input voltage	V_{CC} = 2.3 V to 2.7 V			0.7	V
		V_{CC} = 2.7 V to 3.6 V			0.8	
V_I	Input voltage			0	V_{CC}	V
V_O	Output voltage			0	V_{CC}	V
I_{OH}	High-level output current	V_{CC} = 2.3 V	Y port		-12	mA
		V_{CC} = 2.7 V			-12	
		V_{CC} = 3 V	PARI/O		-12	
			Y port		-24	
I_{OL}	Low-level output current	V_{CC} = 2.3 V	Y port		12	mA
		V_{CC} = 2.7 V			12	
		V_{CC} = 3 V	PARI/O		12	
			Y port		24	
			$\overline{YERR}$ output		24	
$\Delta t/\Delta v$	Input transition rise or fall rate			0	10	ns/V
T_A	Operating free-air temperature			0	70	°C

(1) All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

ELECTRICAL CHARACTERISTICS

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		V_{CC}	MIN	TYP(1)	MAX	UNIT
V_{OH}	Y port	I_{OH} = -100 μA		2.3 V to 3.6 V	V_{CC} - 0.2			V
		I_{OH} = -6 mA,	V_{IH} = 1.7 V	2.3 V	2			
		I_{OH} = -12 mA	V_{IH} = 1.7 V	2.3 V	1.7			
			V_{IH} = 2 V	2.7 V	2.2			
				3 V	2.4			
		I_{OH} = -24 mA,	V_{IH} = 2 V	3 V	2			
	PARI/O	I_{OH} = -12 mA,	V_{IH} = 2 V	3 V	2			
V_{OL}	Y port	I_{OL} = 100 μA		2.3 V to 3.6 V			0.2	V
		I_{OL} = 6 mA,	V_{IL} = 0.7 V	2.3 V			0.4	
		I_{OL} = 12 mA	V_{IL} = 0.7 V	2.3 V			0.7	
			V_{IL} = 0.8 V	2.7 V			0.4	
		I_{OL} = 24 mA,	V_{IL} = 0.8 V	3 V			0.55	
	PARI/O	I_{OL} = 12 mA,	V_{IL} = 0.8 V	3 V			0.55	
	$\overline{YERR}$ output	I_{OL} = 24 mA		3 V			0.5	
I_I		V_I = V_{CC} or GND		3.6 V			±5	μA
$I_{I(hold)}$		V_I = 0.7 V		2.3 V	45			μA
		V_I = 1.7 V		2.3 V	-45			
		V_I = 0.8 V		3 V	75			
		V_I = 2 V		3 V	-75			
		V_I = 0 to 3.6 V(2)		3.6 V			±500	
I_{OH}	$\overline{YERR}$ output	V_O = V_{CC}		0 to 3.6 V			±10	μA
I_{OZ}(3)		V_O = V_{CC} or GND		3.6 V			±10	μA
I_{CC}		V_I = V_{CC} or GND,	I_O = 0	3.6 V			40	μA
ΔI_{CC}		One input at V_{CC} - 0.6 V,	Other inputs at V_{CC} or GND	3 V to 3.6 V			750	μA
C_i	Control inputs	V_I = V_{CC} or GND		3.3 V		5.5		pF
	Data inputs					5.5		
C_o	$\overline{YERR}$ output	V_O = V_{CC} or GND		3.3 V		5		pF
	Data outputs					6		
C_{io}	PARI/O	V_O = V_{CC} or GND		3.3 V		7		pF

(1) All typical values are at V_{CC} = 3.3 V, T_A = 25°C.
(2) This is the bus-hold maximum dynamic current. It is the minimum overdrive current required to switch the input from one state to another.
(3) For I/O ports, the parameter I_{OZ} includes the input leakage current.

TIMING REQUIREMENTS

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (see Figure 1 and Figure 4)

				V_{CC} = 2.5 V ± 0.2 V		V_{CC} = 2.7 V		V_{CC} = 3.3 V ± 0.3 V		UNIT

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

D. Falls within JEDEC: 24/48 Pins – MO-153
14/16/20/56 Pins – MO-194

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
