

VIBTEC Pneumatic ball vibrators

The K series is small in overall size with an easily regulated frequency, through the adjusting of the flow of air. This makes them useful for:-

- - Assisting the flow of material from chutes and hoppers.
- - Preventing bottles or similar objects from locking together on conveyor systems.
- - Compaction of material in containers and moulds.
- - Separation of various sizes of material on screens.
- Max. operating temperature: 100°C Special units are available for use up to 150°C
- Body: Aluminium
- Endplates: Nylon
